

WHAT IS CLAIMED IS:

1. A pixel structure for a liquid crystal display, the pixel structure comprising:
 - a first substrate, with respect to a pixel, having a W-like extruding structure composed of two V-like structures formed on a surface of the first substrate;
 - 5 an second substrate, parallel to the first substrate, having a plurality of openings, wherein the openings are aligned along a direction from a tip of the V-like structures to an edge of the pixel structure, and
 - a liquid crystal layer located between the first substrate and the second substrate, wherein the W-like extruding structure abuts the liquid crystal layer.
- 10 2. The pixel structure of claim 1, wherein a shape of the openings comprises an isosceles triangle, and sides of the isosceles triangle are parallel to sides of the V-like structure.
3. The pixel structure of claim 1, wherein the aligned direction of the openings is parallel to the central line of the V-like structure.
- 15 4. The pixel structure of claim 1, wherein the pixel structure has a shape of quadrat.
5. The pixel structure of claim 4, wherein the shape of pixel structure comprises a baguette.
6. The pixel structure of claim 1, wherein the V-like structure has a tip angle of
20 90 degrees.
7. A baguette pixel structure, comprising:
 - a first substrate having a W-like extruding structure composed of two V-like structures formed on a surface of the first substrate;

an second substrate, parallel to the first substrate, having a plurality of openings, wherein the openings are aligned along a direction from a tip of the V-like structures and vertical to a long edge of the baguette pixel structure; and

a liquid crystal layer located between the first substrate and the second substrate,

5 wherein the W-like extruding structure abuts the liquid crystal layer.

8. The baguette pixel structure of claim 7, wherein a shape of the opening comprises a triangle, wherein an angle of the triangle is pointing to a tip of the V-like structures.
